For those of you who have not been involved before there is a rich heritage of rheumatology research in Pharmacy and Pharmacology, the Royal National Hospital for Rheumatic Diseases (now as part of the RUH) and the Bath Institute for Rheumatic Diseases (BIRD). Bath has led the way in many areas of rheumatology research in the fields of Psoriatic Arthritis, Spondyloarthritis, Myositis, Lupus and Scleroderma to name a few.

These meetings merge the P&P rheumatology research meetings with the hospital research meetings to discuss current research projects and grants applications. This short interactive meeting can be an opportunity to build networks, develop links between hospital and University, encourage more clinicians in to research, more academics to clinical research and build on the great work we already do.

Each 45 minute meeting will consist of two presentations with chaired discussion after each presentation. This will cover the main diseases areas, clinical, lab and epidemiological work as well as potentially have patient representation to build our public and patient involvement.

If you have something that you would like to present at future meetings please email [BIRD](#).
